

SANYO DENKI

Company Profile 2020

We at SANYO DENKI Group Companies, aim to help all people achieve happiness, and work with people to make their dreams come true.

To carry out the corporate philosophy, we do the following:

For Environment...

For society and the natural environment we will help preserve the global environment and contribute to the prosperity of mankind through our corporate activities.

For Customers...

For customers and users we will create new values through technology, products and services.

For Suppliers...

For suppliers and vendors we will strive for integrated technical development and harmonious mutual prosperity through parts purchase, production contracting and joint development.

For Investors...

For investors and financial institutions we will increase our investment worth and credit through sound management policy and good access to information.

For Competitors...

For competitors and the industry we will strive to build industrial and technical development through technical alliances and competition.

For Employees...

For all of our employees we will help individuals to achieve self-fulfillment through their work and the company.

Three Core Technologies and Six Sectors

Under the corporate philosophy to “Aim to help all people achieve happiness”, SANYO DENKI is committed to develop new technologies and products in six sectors on the basis of three technological concepts.

Three Core Technologies

Technology for protecting the global environment

Technology for protecting people's health and safety

Technology for using new energy sources and saving energy

Six Sectors

Medical

Business sector that manufactures medical and nursing equipment for contributing to human health.

Information and communications

Business sector that manufactures ICT equipment such as computers, communications equipment, and their peripheral devices.

Industrial

Business sector that manufactures industrial automation equipment such as machine tools and robots.

Environmental protection

Business sector that manufactures equipment for promoting the protection of the global environment.

Home automation

Business sector that manufactures equipment for improving lifestyle.

Energy utilization

Business sector that manufactures equipment for electric power generation and conversion, energy saving, and new energy utilization.

San Ace

COOLING SYSTEMS

SANUPS

POWER SYSTEMS

SANMOTION

SERVO SYSTEMS

San Ace

COOLING SYSTEMS

Devices using electronic components do not operate properly without heat control solutions.

Our San Ace Cooling Systems products can ensure the stable operation of these devices.

By developing products that feature industry-leading performance, quality, and reliability, we will contribute to improving the performance and reliability of our customers' equipment.

Product Lineup

■ DC Cooling Fan

All of our DC fans feature high reliability and high cooling performance. In addition to standard DC cooling fans, the product lineup includes fans with various features, such as Counter Rotating Fans, Centrifugal Fans, Blowers, and Low Power Consumption Fans. These are suitable for cooling servers, storage, ICT equipment, and the like.

- DC Cooling Fan
- Low Power Consumption Fan
- Silent Fan
- Counter Rotating Fan
- Centrifugal Fan
- Blower
- Reversible Flow Fan

■ Endurance Fan

Endurance fans are DC fans with excellent environmental durability. The series lineup consists of the Wide Temperature Range Fans for use in a temperature range of -40°C to +85°C, Splash Proof Fans for use in water-exposed environments, Long Life Fans with continuous operability of up to 20 years, Oil Proof Fans for use in oil mist environments, and other fans that can maintain stable operation in severe environments.

- Wide Temperature Range Fan
- Splash Proof Fan
- Splash Proof Centrifugal Fan
- Splash Proof Blower
- Oil Proof Fan
- Long Life Fan
- Long Life Counter Rotating Fan
- G Proof Fan

■ AC Cooling Fan

These are long life, high reliability AC cooling fans. In addition to standard AC cooling fans, the lineup includes ACDC fans which internally convert AC power to DC power. They are suitable for the cooling of ICT equipment, control panels, and FA related devices.

- ACDC Fan
- AC Fan

■ Cooling Fan Unit

Cooling fan units have multiple fans embedded in steel sheets or trays. Customized units can be built to satisfy customer requests.

■ Airflow Tester

This is a compact and portable measuring instrument for measuring airflow and system impedance within a device. By using measurement results during thermal design simulation, you can easily and accurately select the optimum fan for a given device.

■ PWM Controller

This device can remotely control the speed of a PWM fan. With this product, PWM fans can be fully utilized without the need for preparing new circuits. The lineup has two types: a Box type that only requires wiring, and a PCB type that must be integrated into equipment.

■ San Ace Controller

This IoT-enabled product can perform automatic control and remote monitoring of PWM fans. It can control the individual speeds of up to four fans. It can monitor and control fans in remote locations via a cloud server, contributing to equipment failure detection and preventive maintenance.

Base Station

Long Life Fan

Centrifugal Fan

Counter Rotating Fan

Splash Proof Fan

Base stations of cellular phones have a high component density and generate a large amount of heat, requiring fans with high cooling and ventilation performance. Therefore, for the cooling and ventilation of inside base stations, it is best to use Counter Rotating Fans or Centrifugal Fans featuring high airflow and static pressure, and Long Life Fans with continuous operability of up to 20 years. Also, Splash Proof Fans are suitable for use in devices installed outdoors.

Digital Signage

Splash Proof Fan

Splash Proof Centrifugal Fan

Low Power Consumption Fan

Digital signage today uses brighter displays and emits a lot of heat, requiring high-performance cooling fans. In addition, its long operating time requires fans with low power consumption ratings. It also requires waterproof and dustproof performance as it may be installed not only indoors but also outdoors. Therefore, our Low Power Consumption Fans, Splash Proof Fans, and Splash Proof Centrifugal Fans are suitable for this use.

Medical Equipment

G Proof Fan

Low Power Consumption Fan

Silent Fan

Blower

CT scanners used in the medical field are required to operate quietly and with less vibration to give patients peace of mind. Our products suitable for those devices include: low noise Silent Fans, highly efficient Low Power Consumption Fans, and G Proof Fans that can withstand the high G-force inside the scanner.

The electronic devices and communication networks indispensable for our daily lives cannot be maintained without a stable power supply. Our SANUPS Power Systems products, including uninterruptible power supplies (UPS) and renewable energy inverters, supply high-quality and stable power to customers' equipment in the event of unexpected power outages as well as in normal situations. They can be used for disaster management and business continuity planning purposes as well.

Product Lineup

■ UPS (Uninterruptible Power Supply)

This device continually supplies power so that a system can function safely without abnormal stoppages or damage in the event of a power outage. We have added UPSs with lithium-ion batteries to our product lineup. UPSs are used as backup power for critical applications such as information systems and financial systems which are required to operate without interruption.

- Online UPS
- Hybrid UPS
- Parallel Processing UPS
- Standby UPS

■ Renewable Energy Inverter

This device supplies power by converting DC power generated by photovoltaic generation systems into AC power. For use in public facilities and industrial installations. Also, with internet access and the SANUPS NET cloud service, PV system status can be monitored from devices such as computers or smartphones. A new power conditioner for wind power and hydroelectric power generation systems had been added to the product lineup.

■ Grid Management System

This unit enables efficient electricity use within a microgrid small-scale energy network. One of its main features is storing excess power generated from distributed energy sources, such as photovoltaic and wind power, in lithium-ion or other types of batteries to use power economically.

■ Voltage Dip Compensator

This device supplies power without interruption in the event of instantaneous power outages or voltage dips, preventing factory facilities from failing or malfunctioning. It is suitable for factory facilities and power equipment.

■ Inverter

This inverter converts DC to stable AC power. The inverter provides the highest possible stability by maintaining a one unit reserve capacity. It prevents equipment malfunction due to waveform disturbance by outputting complete sine waves, making it essential for use in ICT equipment.

■ Static Transfer Switch

This device constantly monitors two power sources, a regular and a spare, and when a voltage dip or power failure occurs it switches the power supply from the regular source to the spare source to continue the power supply without interruption. It is suitable for ICT equipment and other critical load equipment requiring reliability.

■ Emergency Diesel Generator

■ Power Generation Vehicle

These are a diesel generator and power generation vehicle that supply power to public, telecommunication, and infrastructure facilities during emergencies. Combined with a SANYO DENKI uninterruptible power supply (UPS), they ensure continuous supply of stable power over long periods without interruption.

Emergency Management Infrastructures

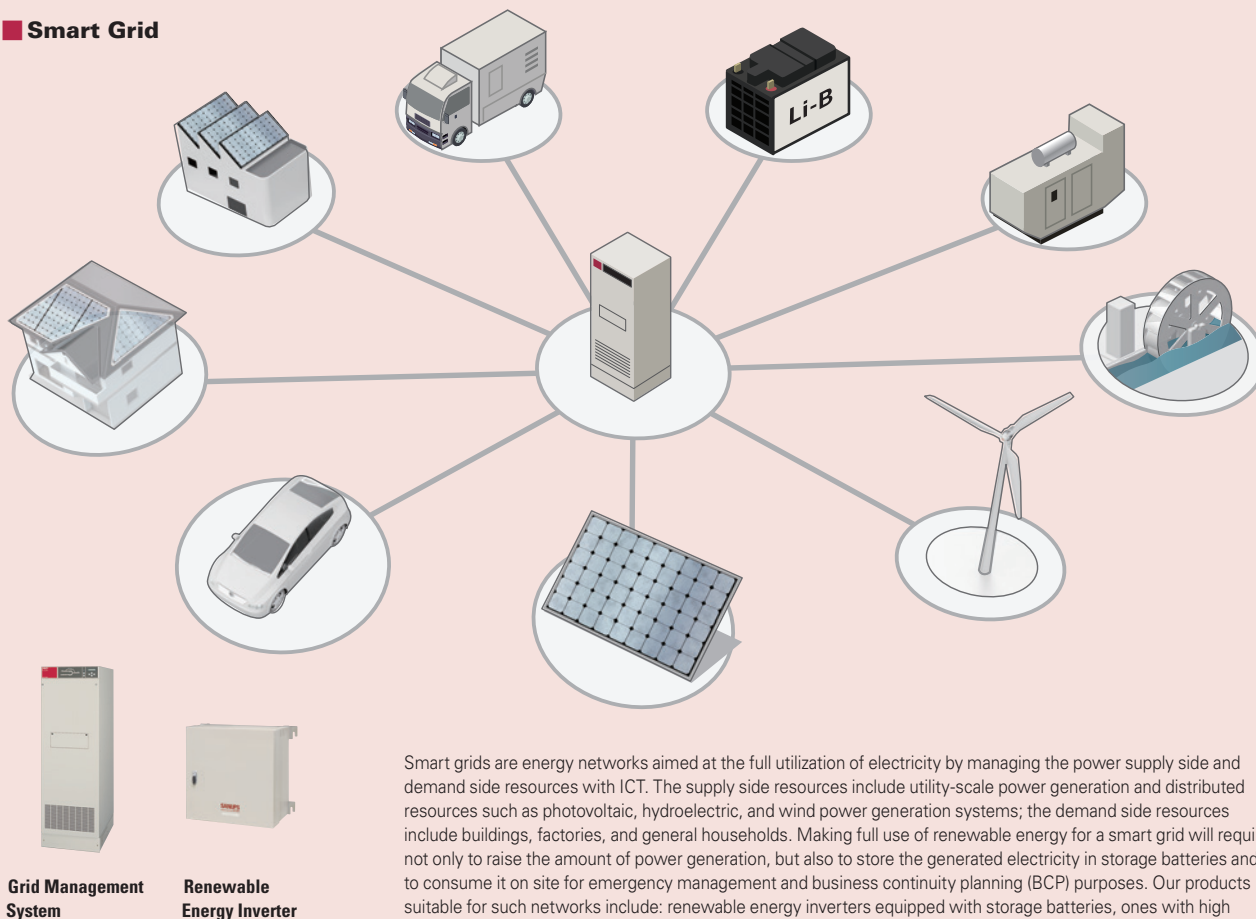

Road signs, monitoring cameras, and base stations of cellular phones are subject to harsh environments indoors and outdoors, requiring backup power UPSs with high environmental durability. Our lithium-ion battery UPSs are perfect for such needs; their long service life reduces maintenance work and wide operating temperature range ensures stable operation even in extreme temperatures, both indoors and outdoors. Furthermore, our outdoor UPS features superior waterproof and dustproof performance with an IP65 protection rating.

Medical Institution

Devices used in medical locations are required to operate with no interruption. Device damage and malfunction caused by power outages or voltage sags could interrupt an analysis or force its restart. To prevent such risks, UPSs are ideal because they can supply power without interruption.

Smart Grid

Smart grids are energy networks aimed at the full utilization of electricity by managing the power supply side and demand side resources with ICT. The supply side resources include utility-scale power generation and distributed resources such as photovoltaic, hydroelectric, and wind power generation systems; the demand side resources include buildings, factories, and general households. Making full use of renewable energy for a smart grid will require not only to raise the amount of power generation, but also to store the generated electricity in storage batteries and to consume it on site for emergency management and business continuity planning (BCP) purposes. Our products suitable for such networks include: renewable energy inverters equipped with storage batteries, ones with high efficiency and environmental durability, and grid management devices that can manage the flow of electric power.

Servo systems are used to drive a wide variety of machines including machine tools, industrial robots, and medical equipment. Our SANMOTION Servo Systems products contribute to improving the productivity of customers' equipment with high-precision and high-speed driving, as well as fine customization.

Product Lineup

■ AC Servo Systems

These are high-accuracy, high-performance servo systems. These achieve high-speed and accurate positioning with vibration suppression function, thereby shortening device cycle time. The lineup also includes high-speed spindle motors. These are suitable for high-speed, high-precision devices such as semiconductor manufacturing equipment, robots, and machine tools. With a wide variety of models available, you can build the optimum system for your device.

■ DC Servo Systems

These are servo systems featuring low vibration and low noise. These systems operate stably at low speeds and achieve highly accurate positioning by combining a high-resolution encoder. These are ideal for measuring instruments.

■ Linear Servo Systems

These servo motors move in straight lines. There is no need to use a ball screw to create straight-line motion, so systems can be simplified. Compared with rotary motors, linear servo systems have higher speed and higher accuracy, which improves productivity. Linear servo systems are suitable for semiconductor manufacturing equipment and chip mounters.

■ Stepping Systems

These stepping systems achieve high-accuracy positioning with simple control. In addition to 2-phase, 3-phase, and 5-phase stepping systems, our lineup includes closed-loop stepping systems that offer all the advantages of both AC servo systems and stepping systems. Our stepping systems are suitable for a wide range of applications, including semiconductor manufacturing equipment, chip mounters, analysis/inspection equipment in the medical and environmental fields, ATMs, and surveillance cameras.

- 2-Phase Stepping Systems
- 3-Phase Stepping Systems
- 5-Phase Stepping Systems
- Closed Loop Stepping Systems

■ Motion Controller

This is a motion controller featuring high-speed EtherCAT fieldbus. It integrates three control functions: motion control, robot control, and sequence control. This controller helps build systems such as robots, conveying machines, and semiconductor manufacturing equipment.

■ Articulated Robots

Motion Controller

Servo Systems

Articulated robots used in factories require highly accurate driving. Our products suitable for these robots include our motion controllers capable of precise robot control and high-speed servo motors with accurate positioning.

■ CT Scanner

Servo Systems

Closed Loop Stepping Systems

CT scanners used in the medical field are required to operate quietly and with less vibration to give patients peace of mind. Our products suitable for those devices include: servo amplifiers capable of high-speed and accurate positioning, servo motors and closed-loop stepping motors that can operate smoothly with low vibration and low noise.

■ Semiconductor Manufacturing Equipment

AC Servo Systems

Closed Loop Stepping Systems

Stepping Systems

High speed and precise positioning are required for driving semiconductor manufacturing equipment, which is increasingly becoming smaller and denser. For such equipment, servo systems and closed-loop stepping systems with high-speed and accurate positioning are suitable.

■ Coordinate Measuring Machine

DC Servo Motor

For coordinate measuring machines that measure three-dimensional objects such as molds and machine parts, DC servo systems that feature smooth and stable driving even at low speeds are ideal.

SANYO KOGYO CO., LTD.

SANYO KOGYO CO., LTD. was established in 1944, and became a member of the SANYO DENKI Group in July 2009.

It is an engineering and trading company engaged in a wide variety of business activities ranging from the sale of electronic and electrical devices, to planning and design of industrial control system, to engineering and maintenance.

Number of employees: 120

Headquarters: Meguro-ku, Tokyo

Sales sites: Tokyo / Kanagawa / Tochigi / Nagano / Osaka / Hiroshima

Main business: Electrical contracting and sales of electrical equipment, control devices, and electrical materials for industrial use
